E - Roadwork

题意

在一条直线上有 N 个障碍，位于 x_i 且每个障碍仅在 $[S_i, T_i]$ 生效。有 Q 个人从 $x = 0$ 等待 D_i 秒后出发，以每秒一单位长度的速度向正方向行走，遇到生效的障碍则立刻停下。输出每个人走的路程，如果无穷则输出 -1 。

数据范围

$1 \leq N, Q \leq 2 \times 10^5$

$0 \leq S_i, T_i \leq 10^9$

$1 \leq X_i \leq 10^9$

$0 \leq D_1 < D_2 < \dots < D_Q \leq 10^9$

题解

第 j 个人在第 i 个障碍停下当且仅当 i 是满足 $S_i \leq x_i + D_j < T_i$ 且 x_i 最小的。也即 $S_i - x_i \leq D_j < T_i - x_i$

所以考虑对每个障碍按 x_i 排序，然后从大到小枚举。每次二分得到满足 $S_i - x_i \leq D_j < T_i - x_i$ 的一个区间，然后用线段树染色。

```
#include<bits/stdc++.h>
